

7. Perform basic video processing operations on the captured video. Read captured video in python and display the video, in slow motion and in fast motion.

Code:

```
import cv2

# Read captured video
cap = cv2.VideoCapture(r"C:\Users\pbr22\OneDrive\Desktop\cv_lab\Comedy.mp4")
print("Press 's' for Slow Motion")
print("Press 'f' for Fast Motion")
print("Press 'q' to Quit")

speed = 30 # Normal speed delay

while True:
    ret, frame = cap.read()
    if not ret:
        break
    # Display video
    cv2.imshow("Video Processing", frame)
    key = cv2.waitKey(speed) & 0xFF
    # Slow motion
    if key == ord('s'):
        speed = 100
    # Fast motion
    elif key == ord('f'):
        speed = 10
    # Quit
    elif key == ord('q'):
        break
cap.release()
cv2.destroyAllWindows()
```

Output:
